                                                                                                                                                                                                                                                                                                                    of excitable membranes. Assuming opened or closed conformatic response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) may pass in accordance with their electrochemical gradient. SUBUNIT: The sodium channel consists of a large polypeptide a smaller ones. This sequence represents a large polypeptide subscripting in the contraction of the contracti
IsoId=P35498-2; Sequence=VSP 001031; IsoId=P35498-2; Sequence=VSP 001031; Note=No experimental confirmation available; Note=No experimental confirmation available; NoMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,S2,S3,S5,S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at every third position.

DISEASE: Defects in SCNIA are the cause of generalized epilepsy with febrile seizures plus type 2 (GEFS+2) [MIM:604233]. This

DE Sodium Channel protein type I alpha subunit (Volt
 RL J. Recept. Res. 7:467-497(1987).

CC -!- FUNCTION: Mediates the voltage-dependent sodium ion permeability CC of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the cC response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions CC may pass in accordance with their electrochemical gradient.

CC subcuri: The sodium channel consists of a large polypeptide and 2-cc subcuri. The sequence represents a large polypeptide.

CC -!- SUBUNIT: The sodium channel family.

CC -!- SUBCELLULAR LOCATION: Integral membrane protein.

CC -!- DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments ($1,$2,$3,$5,$6) and one positively charged characterized by a series of positively charged amino acids at cevery third position.

CC -!- SIMILARITY: Belongs to the sodium channel family.

CC -:- SIMILARITY: Contains 1 10 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

RL J. Recept. Res. 7:467-497(1987).

CC -!- FUNCTION: Mediates the voltage-dependent sodium ion permeability CC -!- FUNCTION: Mediates the voltage-dependent sodium ion permeability CC of excitable membranes. Assuming opened or closed conformations in CC response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions CC may pass in accordance with their electrochemical gradient.

CC may pass in accordance with their electrochemical gradient.

CC -!- SUBCELLULAR LOCATION: Integral membrane protein.

CC -!- SUBCELLULAR ENCATION: Integral membrane protein.

CC -!- DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charged cc segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at cevery third position.

CC every third position.

CC inactivation gates are located near the cytoplasmic surface of the membrane. It is hypothesized that residues 802-806, 847-857, 894-

CC glo, and 942-955 might, in conjunction with the positively charged and considered with the positively charged sensor involved with the

RT "A novel tetrodotoxin-sensitive, voltage-gated sodium channel
RT expressed in rat and human dorsal root ganglia.";

CC -!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
CC -!- SIMILARITY: Belongs to the sodium channel family.

-!- SUBUNIT: Muscle sodium channels contain an alpha subunit and a smaller beta subunit. Interacts with the PDZ domain of the syntrophin SNTA1. SNTB1 and SNTB2 (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,S2,S3,S5,S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at every third position.
-!- DISEASE: Defects in SCN4A are the cause of paramyotonia congenita of von Eulenburg (PMC) [MIM:168300]. PMC is an autosomal dominant sodium channel disease characterized by myotonia, increased by exposure to cold, intermittent flaccid paresis, not necessarily

Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na+ ions may pass in accordance with their electrochemica gradient. This sodium channel may be present in both denervated and innervated skeletal muscle.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBCELLULAR LOCATION: Integral membrane protein.

DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,S2,S3,S5,S6) and one positively charge segment (S4). Segments S4 are probably the voltage-sensors and characterized by a series of positively charged amino acids at every third position.

SIMILARITY: Belongs to the sodium channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBUNIT: Muscle sodium channels contain an alpha subunit and smaller beta subunit. Interacts with the PDZ domain of the syntrophin SNTA1, SNTB1 and SNTB2 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gradient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and innervated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SWISS-PROT entry is copyright. Sodium channel protein type III alpha subunit (Voltage-gated sodium channel alpha subunit Navi.3) (Sodium channel protein, brain III alpha subunit) (Voltage-gated sodium channel subtype III).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of excitable membranes. Assuming opened or closed conformations response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) io may pass in accordance with their electrochemical gradient.

-! SUBUNIT: The sodium channel consists of a large polypeptide and 3 smaller ones. This sequence represents a large polypeptide.

-! SUBCELLULAR LOCATION: Integral membrane protein.

-! DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charge segment (S4). Segments S4 are probably the voltage-sensors and characterized by a series of positively charged amino acids at
                                                                                                                                                                                                                                              InterPro;

The invention relates to a novel method for identifying a subject CC predisposed to a disorder associated with ion channel dysfunction. The CC method comprises ascertaining if at least one of the genes encoding ion CC channel subunits (ICS) has undergone a mutation event so that a CDNA CC of the invention has notropic, neuroprotective, inotropic, antipyretic, CC antiarrhythmic, antimigraine, antidepressant, antiparkinsonian, CC ophthalmological activity. A polynucleotide of the invention acts as an nucleic acids, polypeptides, antibody, selective agonist, antagenist or mucleic acids, polypeptides, antibody, selective agonist, antagenist or animal, are useful for the diagnosis and treatment of epilepsy and/or a disorder associated with ion channel dysfunction, such as hyper or hypothesis, cardiac arrhythmias, misoriant hyperthermia, cardiac arrhythmias, episodic ataxia, migraine, Alzheimer's depression, phobic obsessive symptoms, neuropathic pain, inflammatory cpain, chronic/acute pain, Bartter's syndrome, polycystic kidney disease, fibrosis, congenital stationary night blindness and total colour
                                                                                                                                                                                                                                                                                                                                                                                                   Identifying predisposition to an ion channel dysfunction, such as periodic paralysis, cardiac arrhythmias, migraine, Alzheimer's disease, schizophrenia, anxiety and depression, by detecting encoding-gene
                                                                                                                                                                                                                                                                                                                                                                 Claim 13; SEQ ID NO 140;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mulley JC, H

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្តន្តន
The invention relates to a novel method for identifying a subject predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion derived from the subject has undergone a mutation event so that a CDNA of the invention has nootropic, neuroprotective, inotropic, antipyretic, neuroleptic, tranquiliser, analgesic, nephrotropic, antidabetic, and ophthalmological activity. A polynucleotide of the invention acts as an nucleic acids, polypeptides, antibody, selective agonist, antagonist or nucleic acids, polypeptides, antibody, selective agonist, antagonist or modulator of an ion channel, cells and genetically modified non-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorder associated with ion channel dysfunction, such as hyper- or hypo kalemic periodic paralysis, myotonias, malignant hyporthermia, myasthenia, cardiac arrhythmias, episodic ataxia, migraine, Alzheimer's disease, parkinson's disease, schizophrenia, hyperkplexia, anxiety, depression, phobic obsessive symptoms, neuropathic pain, inflammatory pain, chronic/acute pain, Bartter's symdrome, polycystic kidney disease, pent's disease, hyperinsulinaemic hypoglycaemia of infancy, cystic fibrosis, congenital stationary night blindness and total colour blindness. The present sequence represents a mutant protein of the invention. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.
The invention relates to a recombinantly expressed and isolated human SCNIA (sodium channel type I alpha-subunit) (I). (I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antieplieptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic epilepsy of infancy, stroke, cardiac arrest, hyperkalemic paralysis, motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                              Recombinantly expressed sodium channel type 1 alpha subunit, useful screening for modulators, for treating e.g. epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 George AL,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SCNIA; sodium channel type 1 alpha-subunit; anticonvulsant; analgesic; neuroprotective; anesthetic; cytostatic; cerebroprotective; cardiant;

                                                                                                                                                    The invention relates to a recombinantly expressed and isolated human SCNIA (sodium channel type I alpha-subunit) (I). (I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antispileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic epilepsy of infancy, stroke, cardiac arrest, hyperkalenic paralysis, motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human SCNIA splice variant 33P:SCNIADELp671-681 encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1981 AA;
